

Metal Scrapers That Last 50% Longer

Most manufacturers recommend discarding a metal scraper after ten uses. Not Wheelhouse. Our scraper can safely be used fifteen times, or more, without forfeiting performance and with ZERO risk of tube gouging. That's a 50% increase in the life of the cleaner. There is no cutting feeling from our cleaner because its design provides well-rounded edges, while providing the effective removal of deposits with the longest life in the industry. Whether it's a soft or hard deposit, we have a cleaner for you. For harder deposits choose from either a Bronze or Carbon Steel blade cleaner, for lighter deposits use the Plasta Pig. With overlapping blades, you are assured complete tip to wall contact.

Bronze

These metal scrapers are designed for aging facilities with thinning tube walls. Phosphor bronze spring grade is half as hard as spring steel and more robust than plastic. It will safely remove hardened deposits with no fear of further tube degradation. Additionally, phosphor bronze is rust free, promoting a longer life.

Benefits

- Tube sizes of 5/8" - 1 1/4"
- Overlapping blades to allow full "tip to tube contact"
- Rounded blade ends
- Designed to preserve and keep intact the tube oxide surface
- Phosphor Bronze is a low cost by comparison.
- Robust – will not break during normal use
- Can be manufactured to accommodate tube inserts
- Use with Turbo Gun 35
- Blades remain "tru", shot after shot to remove even the most stubborn deposits

Spring Steel

When it comes to removing hardened deposits, spring steel can handle the task. When cleaning stainless, SEA-CURE, titanium, or carbon tube material, the spring steel metal scraper is the cleaner of choice. Steel blades are hardened, tempered, and then coated with a rust inhibitor with non-corrosive components. The spring steel cleaners provide overlapping blades to ensure complete tube to wall contact of the cleaner. Its rounded blade ends assure gouging will not be an issue.

Benefits

- Tube sizes of 3/4" to 1"
- Overlapping blades to allow full "tip to tube contact"
- Rounded blade ends
- Can be used at least 15 times
- Rust inhibitor to prevent rusting
- Rounded blade ends
- Use with the Turbo Gun 35
- Blades remain "tru", shot after shot to remove even the most stubborn deposits
